# **CHANGE LOG**

This section documents significant changes from previous versions of user manuals for GXP2140/GXP2160. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

#### FIRMWARE VERSION 1.0.0.17

• This is the initial version.

### **WELCOME**

Thank you for purchasing Grandstream GXP2140/GXP2160 Enterprise IP Phone. GXP2140/GXP2160 is a next generation enterprise grade IP phone that features 4.3 inch TFT Color LCD, 5 XML programmable context-sensitive soft keys, dual Gigabit network ports, integrated PoE and Bluetooth, 5-way conference, and Electronic Hook Switch (EHS). Also, it can support up to 4 lines for GXP2140 and 6 lines for GXP2160. The GXP2140/GXP2160 delivers superior HD audio quality, rich and leading edge telephony features, personalized information and customizable application service, automated provisioning for easy deployment, advanced security protection for privacy, and broad interoperability with most 3rd party SIP devices and leading SIP/NGN/IMS platforms. The GXP2160 supports presence and Busy Lamp Field (BLF) in the Multi-Purpose Keys as well. The GXP2140 is expandable with one to 4 expansion modules. The GXP2160/GXP2140 is the perfect choice for enterprise users looking for a high quality, feature rich multi-line executive IP phone with advanced functionalities and performance.

### **Caution**:

Changes or modifications to this product not expressly approved by Grandstream, or operation of this product in any way other than as detailed by this User Manual, could void your manufacturer warranty.

# Marning:

Please do not use a different power adaptor with the GXP2140/GXP2160 as it may cause damage to the products and void the manufacturer warranty.

| Programmable Hard Keys | N/A       | 24        |
| Programmable Soft Keys | 5         | 5         |

**Extension Module** 

Yes, up to 4 EXT Boards,

N/A

### GXP2140/GXP2160 TECHNICAL SPECIFICATIONS

|                     | Table 3: GXP2140 TECHNICAL SPECIFICATIONS  |
|---------------------|--|
| Protocols/Standards | SIP RFC3261, TCP/IP/UDP, RTP/RTCP, HTTP/HTTPS, ARP, ICMP, DNS (A                   |
|                     | record, SRV, NAPTR), DHCP, PPPoE, SSH, TFTP, NTP, STUN, SIMPLE, LLDP,              |
|                     | LDAP, TR-069, 802.1x, TLS, SRTP, IPv6  |
| Network Interfaces  | Dual switched auto-sensing 10/100/1000 Mbps Gigabit Ethernet ports with            |
|                     | integrated PoE   |
| Graphic Display     | 4.3 inch (480x272) TFT color LCD   |
| Bluetooth           | Yes, Bluetooth V2.1  |
| Feature Keys        | 4 line keys with up to 4 SIP accounts, 5 programmable context sensitive softkeys,  |
|                     | 5 navigation/menu keys, 11 dedicated function keys for : MESSAGE (with LED         |
|                     | indicator), PHONEBOOK, TRANSFER, CONFERENCE, HOLD, HEADSET,                        |
|                     | MUTE, SEND/REDIAL, SPEAKERPHONE, VOL+, VOL-  |
| Voice Codec         | Support for G.729A/B, G.711µ/a-law, G.726, G.722 (wide-band), and in-band and      |
|                     | out-of-band DTMF (in audio, RFC2833, SIP INFO)                                     |
| Auxiliary Ports     | RJ9 headset jack (allowing EHS with Plantronics headsets), USB, extension          |
|                     | module port  |
| Telephony Features  | Hold, transfer, forward, 5-way conference, call park, call pickup,                 |
|                     | shared-call-appearance (SCA)/bridged-line-appearance (BLA), downloadable           |
|                     | phonebook (XML, LDAP, up to 2000 items), call waiting, call log (up to 500         |
|                     | records), customization of screen, off-hook auto dial, auto answer, click-to-dial, |
|                     | flexible dial plan, hot desking, personalized music ringtones and music on hold,   |
|                     | server redundancy and fail-over  |
| Sample Applications | Weather, currency, GMI available for advanced custom application development       |
| HD audio            | Yes, both on handset and speakerphone  |
| Extension Module    | Yes, can power up up to 4 GXP2200EXT modules which features a 128x384              |
|                     | graphic LCD, 20 quick-dial/BLF keys which dual-color LED, 2 navigation keys,       |
|                     | and less than 1.2W power consumption per unit.                                     |
| Base Stand          | Yes, allow 2 angle positions   |
| Wall Mountable      | Yes  |
| QoS                 | Layer 2 (808.1Q, 802.1p) and Layer 3 (ToS, DiffServ, MPLS) QoS                     |
|                     | •  |

#### Table 3: GXP2140 TECHNICAL SPECIFICATIONS

| Security             | User and administrator level passwords, MD5 and MD5-sess based                |  |  |
|----------------------|---|--|--|
|                      | authentication, AES based secure configuration file, SRTP, TLS, 802.1x media  |  |  |
|                      | access control  |  |  |
| Multi-language       | English, Arabic, Chinese, Croatian, Czech, Dutch, German, French, Hebrew,     |  |  |

## **INSTALLATION**

### **EQUIPMENT PACKAGING**

| Main Case         | Yes | 1 |
|-------------------|-----|---|
| Handset           | Yes | 1 |
| Phone Cord        | Yes | 1 |
| Power Adaptor     | Yes | 1 |
| Ethernet Cable    | Yes | 1 |
| Phone Stand       | Yes | 1 |
| Wall Mount        | Yes | 1 |
| Quick Start Guide | Yes | 1 |

### Table 5: GXP2140/GXP2160 EQUIPMENT PACKAGING

#### **CONNECTING YOUR PHONE**

#### Table 6: GXP2140/GXP2160 CONNECTORS

| Handset Port | RJ9 handset connector port   |
|--------------|--|
| Headset Port | RJ9 headset connector port (supporting EHS with Plantronics headset) |
| USB Port     | USB port connecting a USB flash drive.                               |
| LAN Port     | 10/100/1000Mbps RJ-45 port connecting to Ethernet                    |
| PC Port      | 10/100/1000Mbps RJ-45 port connecting to PC                          |
| EXT Port     | RJ11 connector port to connect the GXP2200EXT Board(GXP2140)         |
| Power Jack   | 12V DC Power connector port  |

To set up the GXP2140/GXP2160, follow the steps below:

- 1. Attach the phone stand or wall mount to the back of the phone where there are slots;
- 2. Connect the handset and main phone case with the phone cord;
- 3. Connect the LAN port of the phone to the RJ45 socket of a hub/switch or a router (LAN side of the router) using the Ethernet cable;
- 4. Connect the 12V DC output plug to the power jack on the phone; plug the power adapter into an electrical outlet. If PoE switch is used in step 3, this step could be skipped;
- 5. The LCD will display provisioning or firmware upgrade information. Before continuing, please wait for the date/time display to show up;

6. Using the keypad configuration menu or phone's embedded web server (Web GUI) by entering the IP address in web browser, you can further configure the phone.

### **GXP2200EXT MODULE**

The GXP2140 is expandable with GXP2200EXT modules. GXP2140 supports up to 4 extension modules, adding 160 fully programmable phone extensions to the phone.

GXP2200EXT board package contains:

| GXP2200EXT Main Case     | Yes (1) |
|--------------------------|---------|
| GXP2200EXT Stand         | Yes (1) |
| RJ11-RJ11 Cable          | Yes (1) |
| Connector Plate          | Yes (1) |
| Screws                   | Yes (4) |
| Quick Installation Guide | Yes (1) |

#### Table 7: GXP2200EXT Packaging

# ∧ Note:

The GXP2200EXT board is an additional accessory for the GXP2140 and is not included in the GXP2140 box.

To set up the GXP2200EXT board with the GXP2140, please follow the steps below:

- 1. On the back of the GXP2140 and the GXP2200EXT, there are slots for connector plate. Attach the connector plate between the slots for GXP2140 and the GXP2200EXT;
- 2. Apply the screws provided and securely tighten them in (See Figure 1: GXP2140 Back View with GXP2200EXT).
- 3. Connect the GXP2200EXT board to the GXP2140 via EXT port using the RJ11-RJ11 cable provided;
- 4. Install the phone stand on the GXP2140 and the GXP2200EXT board;
- 5. Power up the GXP2140. The GXP2200EXT board will show the booting up screen with version information and connecting status;

6. After successfully booting up, the GXP2200EXT board will stay in idle. Press and hold the Left button for 3 to 5 seconds to check the version information and status.

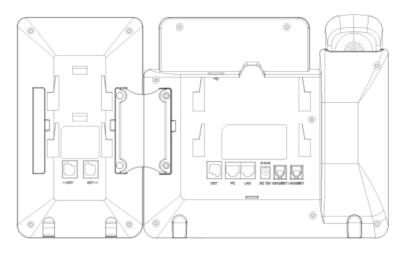

Figure 1: GXP2140 Back View with GXP2200EXT

The GXP2200EXT board can be configured via the web GUI of the GXP2140 connected. After successfully configured, press Left or Right button on the GXP2200EXT board and users could browse all the MPK's status in different pages.

For more information on installing, connecting and configuring the GXP2200EXT board with GXP2140, please refer to the GXP2200EXT board user manual:

http://www.grandstream.com/support

#### SAFETY COMPLIANCES

The GXP2140/GXP2160 phone complies with FCC/CE and various safety standards. The GXP2140/GXP2160 power adapter is compliant with the UL standard. Use the universal power adapter provided with the GXP2140/GXP2160 package only. The manufacturer's warranty does not cover damages to the phone caused by unsupported power adapters.

#### WARRANTY

If the GXP2140/GXP2160 phone was purchased from a reseller, please contact the company where the phone was purchased for replacement, repair or refund. If the phone was purchased directly from

Grandstream, contact the Grandstream Support for a RMA (Return Materials Authorization) number before the product is returned. Grandstream reserves the right to remedy warranty policy without prior notification.

# Marning:

Use the power adapter provided with the phone. Do not use a different power adapter as this may damage the phone. This type of damage is not covered under warranty.

# **GETTING TO KNOW GXP2140/GXP2160**

### **IDLE SCREEN**

GXP2140/GXP2160 screen displays differently depending on whether the phone is idle or in use (active). The following figures show the idle screen of GXP2140/GXP2160.

Figure 2: GXP2140 Idle Screen

| 🖻 John Smith   | O         |
|----------------|-----------|
| David Robinson |           |
| Brenda T.      |           |
| Peter P.       |           |

| Michael F.     | 04: 29 PM |
| ForwardAll     |           |

Figure 3: GXP2160 Idle Screen

The following table describes the items displayed on the GXP2140/GXP2160 idle screen.

#### Table 8: LCD DISPLAY DEFINITIONS

| DATE AND TIME              | Displays the current date and time. It can be synchronized with Internet time servers.  |
|----------------------------|---|
| NETWORK ICON               | Shows the status of network. It will indicate whether the network is down or starting.  |
| STATUS ICON                | Shows the status of the phone for registration status, call features and etc, using icons as shown in the next table.   |
| LINE STATUS                | Displays the name of the account that is in use.  |
| SOFTKEYS in Idle<br>Screen | <ul> <li>The softkeys are context sensitive and will change depending on the status of the phone. Typical functions assigned to softkeys are:</li> <li>SwitchSCR/NEXTSCR <ul> <li>Toggles between different idle screens. For example, for GXP2140/GXP2160, pressing SwitchSCR will toggle among default idle screen, weather information, currency information and Grandstream Upcoming Events;</li> <li>ForwardAll <ul> <li>Unconditionally forwards the phone line (account 1) to another phone.</li> </ul> </li> <li>MissedCalls <ul> <li>Shows up unanswered calls to this phone.</li> </ul> </li> <li>Redial <ul> <li>Redials the last dialed number when there is existed dialed call log.</li> </ul> </li> <li>Note: <ul> <li>If XML application is used for GXP2140/GXP2160, the softkey for XML application will show up in the default idle screen as configured.</li> </ul> </li> </ul></li></ul> |
| SOFTKEYS in Call<br>Screen | <ul> <li>The softkeys are context sensitive and will change depending on the call status of the phone. Here are the main softkeys in call screen.</li> <li>Redial Redials the last dialed number after off hook when there is existed call log.</li> <li>Dial</li> </ul>  |

Dials the call out after off hook and entering the number.

AnswerCall

Answers the incoming call when the phone is ringing.

#### RejectCall

Rejects the incoming call when the phone is ringing.

- EndCall
   Ends the active call.
- Transfer

Transfer softkey will show up after pressing TRAN button and entering transfer target number. Press Transfer softkey to do blind transfer.

• Split

In auto-attended transfer mode, after establishing the second call, press Split to quit transfer and go back to normal talking status.

ConfCall

Conferences the active calls.

#### ReConf

Re-establish the conference among the calls on hold.

| SPECIAL<br>SOFTKEYS  | <b><u>Call Parking</u></b> : Please refer to UCM61xx Online User Manual for more information.  |

#### Table 10: GXP2140/GXP2160 Keypad Buttons

|            | Contacts. Press to view and edit contact information.   |
|------------|---|
|            | Hold. Press to put call on hold or resume the call.     |
| Ŧ          | Mute. Press to mute or unmute the call.                 |
| $\bigcirc$ | Headset. Press to switch to headset mode.               |
|            | Message. Press to view voicemail messages.              |
| <b>2-2</b> | Transfer. Press to transfer call.                       |
|            | Conference. Press to conference call.                   |
|            | Speaker.  |
|            | Send/Redial.  |
| +          | Volume.   |
|            | Up Navigation key. In idle screen, press to see the IP. |

#### **MAKING PHONE CALLS**

#### HANDSET, SPEAKER AND HEADSET MODE

The GXP2140/GXP2160 allows users to switch among handset, speaker or headset when making calls. Press the Hook Switch to switch to handset; press the Headset button to switch to headset; or press the

Speaker button (1) to switch to speaker.

#### **MULTIPLE SIP ACCOUNTS AND LINES**

GXP2160 can support up to 6 independent SIP accounts; GXP2140 can support up to 4 independent SIP accounts. Each account is capable of independent SIP server, user and NAT settings. Each of the line buttons is "virtually" mapped to an individual SIP account. In off hook state, select an idle line and the dial tone will be heard.

To make a call, select the line you wish to use. The corresponding LINE LED will light up in green. The user can switch lines before dialing any number by pressing the LINE buttons.

**For example**: If 2 independent accounts are registered on GXP2140/GXP2160, when LINE 1 is pressed, the LINE 1 LED will light up in green. If LINE 2 is pressed, the LINE 2 LED will light up in green and the subsequent call will be made through SIP account 2.

Incoming calls to a specific account will attempt to use its corresponding LINE if it is not in use. When the "virtually" mapped line is in use, the phone will flash the other available LINE in red. A line is ACTIVE when it is in use and the corresponding LED is red.

#### **COMPLETING CALLS**

There are several ways to complete a call.

- **On hook dialing.** Enter the number when the phone is on hook and then send out.
  - > When the phone is in idle, enter the number to be dialed out;
  - Take handset off hook; or Press Speaker button; or Press Headset button with headset plugged in; or Select an available LINE key;
  - The call will be dialed out.

- Off hook and dial. Off hook the phone, enter the number and send out.
  - Take handset off hook; or
    - Press Speaker button; or
    - Press Headset button with headset plugged in; or
    - Press an available LINE key to activate speaker;
  - You shall hear dial tone after off hook;
  - Enter the number;
  - > Press SEND key or # to dial out.
- Predictive dialing. When dialing numbers, based on the entered digit or digits, the phone will predict
  and list the candidates of target number. If the target number already saved in phonebook, when enter
  the first several digits, phone will display a list of the matched numbers. If the target number appears
  on the list, user could select the number by Up/Down key and dial out. GXP2140/GXP2160 have
  predefined call feature code (the first digit is \*). When user enter \* as the first digit of target number, the
  phone will list all feature codes as candidates.
- Redial. Redial the last dialed number.
  - Take handset off hook; or
    - Press Speaker button; or
    - Press Headset button with headset plugged in; or
    - Press an available LINE key to activate speaker; or
    - When the phone is in idle;
  - > Press SEND key, or the REDIAL soft key.
- Via Call History. Dial the number logged in phone's call history.
  - Press MENU button to bring up the main menu;
  - Enter Call History;
  - > Select the entry you would like to call using the navigation arrow keys;
  - > Press SEND button to dial out.
- Via Phonebook. Dial the number from the phonebook.
  - Press Contacts button;
  - > Under Contacts, enter Local Phonebook/ Broadsoft Phonebook using the navigation arrow key;
  - Select the contact you would like to call using the navigation arrow key;
  - > Press SEND button to dial the selected contact.
- **Speed Dial from Line Key.** Dial the number configured as Speed Dial on Line Key.
  - Go to phone's Web GUI->Settings->Programmable Keys, configure the Line Key's Key Mode as Speed Dial. Select the account to dial from, enter the Name and User ID (the number to be dialed out) for the Line Key. Click on "Update" at the bottom of the Web GUI page;

- > Off hook the phone, or directly press the Speed Dial key to dial out.
- Call Return. Dial the last answered call.
  - Go to phone's Web GUI->Settings->Programmable Keys, configure the Line Key's Key Mode as Call Return. Select the account to dial from, no Name or User ID has to be set on for Call Return;
  - > Off hook the phone, or directly press the Call Return key to dial out.

#### • Via Paging/Intercom.

- > Take handset off hook; or
  - Press Speaker button; or
  - Press Headset button with headset plugged in; or
  - Press an available LINE key to activate speaker;
- You shall hear dial tone after off hook;
- > Press MENU button to switch the call screen from "Dialing" to "Paging";
- Enter the number;
- Press SEND key or # to dial out.

#### Note:

- After entering the number, the phone waits for the No Key Entry Timeout (Default timeout is 4 seconds, configurable via Web GUI) before dialing out. Press SEND or # key to override the No Key Entry Timeout;
- If digits have been entered after handset is off hook, the SEND key will works as SEND instead of REDIAL;
- By default, # can be used as SEND to dial the number out. Users could disable it by setting "User # as Dial Key" to "No" from Web GUI->Account X->Call Settings;
- For Paging/Intercom, if the SIP Server/PBX supports the feature and has Paging/Intercom feature code set up already, users do not necessarily need toggle to paging mode in the call screen. Simply dial the feature code with extension as a normal call.
- When dial out via paging, user can see the "call-info" header contains "answer-after=0" and "the "alert-info" header contains "info=alert-autoanswer;delay=0" in the outgoing INVITE.
- During an active call, user can see call info on LCD: 🙆 shows the call lasting time; 🖽 shows contact information if the number already be saved in phonebook. When dialing DTMF, user can press round OK button to switch to call info page.

#### MAKING CALLS USING IP ADDRESSES

Direct IP Call allows two phones to talk to each other in an ad-hoc fashion without a SIP proxy. VoIP calls can be made between two phones if:

- Both phones have public IP addresses; or
- Both phones are on the same LAN/VPN using private or public IP addresses; or
- Both phones can be connected through a router using public or private IP addresses (with necessary port forwarding or DMZ).

To make a direct IP call, please follow the steps below:

- When phone is at idle state, press any number key or \* key to bring up "Onhook Dialing" page;
- Press round menu key or "DirectIP" soft key;
- Input the target IP address (Please see example below) ;
- Press "OK" soft key to dial.

#### For example:

If the target IP address is 192.168.1.60 and the port is 5062 (i.e., 192.168.1.60:5062), input the following: 192\*168\*1\*60#5062. The \* key represents the dot (.), the # key represents colon (:). Wait for about 4 seconds and the phone will initiate the call.

#### Quick IP Call Mode:

The GXP2140/GXP2160 also supports Quick IP Call mode. This enables the phone to make direct IP calls using only the last few digits (last octet) of the target phone's IP address. This is possible only if both phones are under the same LAN/VPN. This simulates a PBX function using the CSMA/CD without a SIP server. Controlled static IP usage is recommended.

To enable Quick IP Call Mode, go to phone's Web GUI->Settings->Call Features, set "Use Quick IP Call Mode" to "Yes". Clicking on "Save and Apply" on the bottom of Web GUI page to take the change. To make Quick IP Call, take the phone off hook first. Then dial #xxx where x is 0-9 and xxx<255. Press # or SEND and a direct IP call to aaa.bbb.ccc.XXX will be completed. "aaa.bbb.ccc" is from the local IP address regardless of subnet mask. The number #xx or #x are also valid. The leading 0 is not required (but it's OK).

#### For example:

- 192.168.0.2 calling 192.168.0.3 -- dial #3 followed by # or "SEND";
- 192.168.0.2 calling 192.168.0.23 -- dial #23 followed by # "SEND";
- 192.168.0.2 calling 192.168.0.123 -- dial #123 followed by # "SEND";

• 192.168.0.2: dial #3 and #03 and #003 results in the same call -- call 192.168.0.3.

#### Note:

- The # will represent colon ":" in direct IP call rather than SEND key as in normal phone call;
- If you have a SIP server configured, direct IP call still works. If you are using STUN, direct IP call will also use STUN;
- Configure the "User Random Port" to "No" when completing direct IP calls.

### **ANSWERING PHONE CALLS**

#### **RECEIVING CALLS**

- **Single incoming call**. Phone rings with selected ring tone. The corresponding LINE key will flash in red. Answer call by taking handset off hook, or using Speaker/Headset, or pressing the flashing LINE key;
- **Multiple incoming calls**. When another call comes in while having an active call, the phone will produce a Call Waiting tone (stutter tone). The other LINE key will flash in red. Answer the incoming call by pressing the flashing LINE key. The current active call will be put on hold automatically.

#### **DO NOT DISTURB**

Do Not Disturb can be enabled/disabled from phone's LCD by following the steps below:

- Press the Menu button and select "Preference" using navigation keys;
- Press Menu button again to get into Preference options;
- When "Do Not Disturb" is highlighted, press Left/Right key to disable/enable DND;
- Press "Save" soft key to save the change.

When Do Not Disturb feature is turned on, the DND icon will appear on the top of the LCD. The incoming call will not be accepted or the call will directly go into voicemail.

#### **DURING A PHONE CALL**

#### CALL WAITING/CALL HOLD

• Hold. Place a call on hold by pressing the HOLD button. The active LINE key will blink in green;

- **Resume**. Resume call by pressing the blinking LINE key;
- **Multiple calls**. Automatically place active call on hold or switch between calls by pressing the LINE key. Call waiting tone (stutter tone) will be audible on new incoming call during the active call.

#### MUTE

During an active call, press the MUTE button to mute/unmute the microphone. The LCD will show the Mute icon on the top of screen, when the call is muted.

#### **CALL TRANSFER**

GXP2140/GXP2160 supports Blind Transfer, Attended Transfer and Auto-Attended Transfer.

#### • Blind Transfer.

- > During the first active call, press TRAN key and dial the number to transfer to;
- > Press SEND key or # to complete transfer of active call.

#### • Attended Transfer.

- > During the first active call, press LINE key. The first call will be put on hold;
- > Enter the number for the second call in the new line and establish the call;
- Press TRAN key;
- > Press the other LINE key which is on hold to transfer the call.

#### • Auto-Attended Transfer.

- Set "Auto-Attended Transfer" to "Yes" under Web GUI->Settings->Call Features. And then click "Save and Apply" on the bottom of the page;
- Establish one call first;
- During the call, press TRAN key. A new line will be brought up and the first call will be automatically placed on hold;
- Dial the number and press SEND or # to make a second call. (Once the number is entered, a "Transfer" soft key will show. If "Transfer" soft key is pressed instead of SEND or #, a blind transfer

will be performed);

- > Press TRAN key again. The call will be transferred.
- For Auto-Attended Transfer, after dialing out the number for the second call, a "Split" soft key will show. If the second call is not established yet (ringing), pressing "Split" will hang up the second call. If the second call is established (answered), pressing "Split" will resume the second call and keep the first call on hold.

#### Note:

• To transfer calls across SIP domains, SIP service providers must support transfer across SIP domains.

#### **5-WAY CONFERENCING**

GXP2140/GXP2160 can host up to 5-way conference call with other parties (PCMU/PCMA).

- Initiate a conference call.
  - > Establish calls with 2 or more parties respectively;
  - > While 1 call is active, the other call will be put on hold with its LINE key blinking in green;
  - Press CONF key;
  - > Press the desired LINE key on hold, the conference will be established;
  - > Repeat the previous 2 steps for all the other parties on hold to join the conference.

#### • Cancel Conference.

- If after pressing the CONF key, the user decides not to conference, press Cancel softkey or the current active LINE key (LED in solid green);
- > This will resume the 2-way conversation with the current line.

#### • Split and Re-conference.

- During the conference, press HOLD key. The conference call will be split and the calls will be put on hold separately with the LINE keys blinking in green;
- > Select 1 LINE key and press to resume the 2-way conversation;
- If users would like to re-establish conference call, before 1 separate LINE is selected, press the ReConf soft key right after the conference call is held/split;

#### • End Conference.

- Press HOLD key to split the conference call. The conference call will be ended with both calls on hold; Or
- > Users could press the EndCall soft key or simply hang up the call to terminate the conference call.

GXP2140/GXP2160 supports **Easy Conference Mode**, which can be used combined with the traditional way to establish the conference.

#### • Initiate a conference call.

- Establish 1 call;
- > Press CONF key and a new line will be brought up using the same account;
- > Dial the number and press SEND key to establish the second call;
- > Press CONF key or press the ConfCall softkey to establish the conference.
- Join more parties in established conference call.
  - Establish conference call;
  - > Press CONF key and a new line will be brought up using the same account;
  - > Dial the number and press SEND key to establish the second call;
  - > Press CONF key or press the ConfCall softkey to join the new party in the established conference.

#### • Split and Re-conference.

- During the conference, press HOLD key. The conference call will be split and both calls will be put on hold separately with 2 LINE keys blinking in green;
- > Select 1 LINE key and press to resume the 2-way conversation;
- If users would like to re-establish conference call, before 1 separate LINE is selected, press the ReConf softkey right after the conference call is split.

#### • Cancel Conference.

- If users decides not to conference after establishing the second call, press EndCall softkey instead of the ConfCall softkey/CONF key;
- > This will end the second call and the screen will show the first call on hold.
- End Conference.
  - Press HOLD key to split the conference call. The conference call will be ended with both calls on hold; Or

> Users could press the EndCall softkey or simply hang up the call to terminate the conference call.

#### Note:

- The party that starts the conference call has to remain in the conference for its entire duration, you can put the party on mute but it must remain in the conversation. Also, this is not applicable when the feature "Transfer on Conference Hangup" is turned on.
- The option "Disable Conference" has to be set to "No" to establish conference.
- When using **Easy Conference Mode**, use SEND key to dial out the second call instead of using #, even when # could be used as SEND in normal phone calls.

#### **VOICE MESSAGES (MESSAGE WAITING INDICATOR)**

A blinking red MWI (Message Waiting Indicator) on the top right corner of the phone indicates a message is waiting. Dial into the voicemail box to retrieve the message by entering the voice mail number of the server or pressing the Voicemail button (Voice Mail User ID has to be properly configured as the voice mail number under Web GUI->Account x->General Settings). An IVR will prompt the user through the process of message retrieval.

#### SHARED CALL APPEARANCE (SCA)

The GXP2140/GXP2160 phone supports shared call appearance by Broadsoft standard. This feature allows members of the SCA group to shared SIP lines and provides status monitoring (idle, active, progressing, hold) of the shared line. When there is an incoming call designated for the SCA group, all of the members of the group will be notified of an incoming call and will be able to answer the call from the phone with the SCA extension registered.

All the users that belong to the same SCA group will be notified by visual indicator when a user seizes the line and places an outgoing call, and all the users of this group will not be able to seize the line until the line goes back to an idle state or when the call is placed on hold (with the exception of when multiple call appearances are enabled on the server side).

In the middle of the conversation, there are two types of hold: Public Hold and Private Hold. When a member of the group places the call on public hold, the other users of the SCA group will be notified of this by the red-flashing button and they will be able to resume the call from their phone by pressing the line button. However, if this call is placed on private-hold, no other member of the SCA group will be able to resume that call.

To enable shared call appearance, the user would need to register the shared line account on the phone.

In addition, they would need to navigate to "Settings"->"Programmable Keys" on the web UI and set the line key mode as "Shared Line". If the user requires more shared call appearances, the user can configure multiple line buttons to be "shared line" buttons associated with the account.

### **CALL FEATURES**

The GXP2140/GXP2160 supports traditional and advanced telephony features including caller ID, caller ID with caller Name, call forward and etc.

| *30 | <ul> <li>Block Caller ID (for all subsequent calls)</li> <li>Off hook the phone;</li> <li>Dial *30.</li> </ul>                                      |
|-----|---|
| *31 | <ul> <li>Send Caller ID (for all subsequent calls)</li> <li>Off hook the phone;</li> <li>Dial *31.</li> </ul>                                       |
| *50 | <ul> <li>Disable Call Waiting</li> <li>Off hook the phone;</li> <li>Dial *50.</li> </ul>  |
| *51 | <ul> <li>Enable Call Waiting</li> <li>Off hook the phone;</li> <li>Dial *51.</li> </ul>   |
| *67 | <ul> <li>Call with Caller ID Blocked (per call)</li> <li>Off hook the phone;</li> <li>Dial *67 and then enter the number to dial out.</li> </ul>    |
| *82 | <ul> <li>Call with Caller ID Enabled (per call)</li> <li>Off hook the phone;</li> <li>Dial *82 and then enter the number to dial out.</li> </ul>    |
| *70 | <ul> <li>Call with Call Waiting Disable (per Call)</li> <li>Off hook the phone;</li> <li>Dial *70 and then enter the number to dial out.</li> </ul> |
| *71 | Call with Call Waiting Enabled (per Call)   |

#### Table 11: CALL FEATURES

|     | <ul> <li>Off hook the phone;</li> <li>Dial *71 and then enter the number to dial out.</li> </ul>   |
|-----|--|
| *72 | <ul> <li>Unconditional Call Forward. To set up unconditional call forward:</li> <li>Off hook the phone;</li> <li>Dial *72 and then enter the number to forward the call;</li> <li>Press OK softkey or SEND key.</li> </ul> |
| *73 | <ul> <li>Cancel Unconditional Call Forward. To cancel the unconditional call forward:</li> <li>Off hook the phone;</li> <li>Dial *73;</li> <li>Hang up the call.</li> </ul>  |
| *90 | <ul> <li>Busy Call Forward. To set up busy call forward:</li> <li>Off hook the phone;</li> <li>Dial *90 and then enter the number to forward the call;</li> <li>Press OK softkey or SEND key.</li> </ul>                   |
| *91 | <ul> <li>Cancel Busy Call Forward. To cancel the busy call forward:</li> <li>Off hook the phone;</li> <li>Dial *91;</li> <li>Hang up the call.</li> </ul>  |
| *92 | <ul> <li>Delayed Call Forward. To set up delayed call forward:</li> <li>Off hook the phone;</li> <li>Dial *92 and then enter the number to forward the call;</li> <li>Press OK softkey or SEND key.</li> </ul>             |
| *93 | <ul> <li>Cancel Delayed Call Forward. To cancel the delayed call forward:</li> <li>Off hook the phone;</li> <li>Dial *93;</li> <li>Hang up the call.</li> </ul>  |

# **CONFIGURATION GUIDE**

The GXP2140/GXP2160 can be configured via two ways:

- LCD Configuration Menu using the phone's keypad;
- Web GUI embedded on the phone using PC's web browser.

## **CONFIGURATION VIA KEYPAD**

To configure the LCD menu using phone's keypad, follow the instructions below:

- Enter MENU options. When the phone is in idle, press the round MENU button to enter the configuration menu;
- **Navigate in the menu options**. Press the arrow keys up/down/left/right to navigate in the menu options;
- Enter/Confirm selection. Press the round MENU button or "Select" soft key to enter the selected option;
- Exit. Press "Exit" soft key to exit to the previous menu;
- Return to Home page.

When in the Main menu, press Home soft key to return home screen; When in sub menu, press and hold "Exit" soft key until the Exit soft key changes to Home soft key, then release the soft key.

- The phone automatically exits MENU mode with an incoming call, when the phone is off hook or the MENU mode if left idle for more than 60 seconds.
- When the phone is in idle, pressing the UP navigation key can see phone's IP address.

The MENU options are listed in the following table.

#### Table 12: CONFIGURATION MENU

| Call History | Displays call logs for answered calls, dialed calls, missed calls, transferred calls and forwarded calls.   |
|--------------|---|
| Status       | <ul> <li>Displays account status, network status, software version number and Hardware</li> <li>Account status.</li> <li>Network status.</li> <li>Press to enter the sub menu for IP setting information (DHCP/Static IP/PPPoE), IPv4 address, IPv6 address, Subnet Mask, Gateway and DNS server.</li> <li>Software Version Press to enter the sub menu for Boot, Core, Base and Prog version. </li> <li>Hardware Press to enter the sub menu for MAC address, Hardware version and P/N</li></ul> |

|            | number.  |
|------------|--|
| Contacts   | <ul> <li>Contacts sub menu includes the following options:</li> <li>Local Phonebook</li> <li>Local Group</li> <li>Broadsoft Phonebook</li> <li>LDAP Directory Contacts sub menu is for Local Phonebook, Local Group, LDAP Directory and Broadsoft Phonebooks. User could configure phonebooks/groups/LDAP options here, download phonebook XML to the phone and search phonebook/LDAP directory.</li></ul>   |
| Messages   | <ul> <li>Message sub menu include the following options:</li> <li>Instant Message<br/>Displays received instant messages;</li> <li>Voice Mails<br/>Displays voicemail message information in the format below: new<br/>messages/all messages (urgent messages/all urgent messages).</li> </ul>   |
| Preference | <ul> <li>Preference sub menu includes the following options:</li> <li>Do Not Disturb<br/>Enables/disables Do Not Disturb on the phone.</li> <li>Star Key Lock<br/>Turns on/off keypad lock feature and configures keypad lock password.</li> <li>Sounds <ul> <li>Ring Tone<br/>Configures different ring tones for incoming call.</li> <li>Ring Volume<br/>Adjusts ring volume by pressing left/right arrow key.</li> </ul> </li> <li>Appearance <ul> <li>Active LCD Brightness<br/>Adjusts active LCD brightness by pressing left/right arrow key</li> <li>Idle LCD Brightness<br/>Adjusts idle LCD brightness by pressing left/right arrow key</li> <li>Display Language<br/>Selects the language to be displayed on the phone's LCD. Users</li> </ul> </li> </ul> |

|        | <ul> <li>could select Automatic for local language based on IP location if available.</li> <li>Time Settings</li> <li>Configures data and time on the phone</li> </ul>   |
|--------|--|
|        | Configures date and time on the phone.   |
| Phone  | <ul> <li>Phone sub menu includes the following options:</li> <li>SIP         <ul> <li>Configures SIP Proxy, Outbound Proxy, SIP User ID, SIP Auth ID, SIP Password, SIP Transport and Audio information to register SIP account on the phone.</li> </ul> </li> <li>Call Features         <ul> <li>Configures call forward features for Forward All, Forward Busy, Forward No Answer and No Answer Timeout.</li> </ul> </li> </ul>  |
| System | System sub menu includes the following options:<br>Network<br>IP Setting<br>Selects IP mode (DHCP/Static IP/PPPoE); Configures PPPoE<br>account ID and password; Configures static IP address, Netmask,<br>Gateway, DNS Server 1 and DNS Server 2.<br>802.1X<br>Enables/Disables 802.1X mode; Configures 802.1x identity and<br>MD5 password.<br>Layer 2 QoS<br>Configures 802.1Q/VLAN Tag and priority value.<br>Bluetooth Settings<br>Power<br>Turns on/off the Bluetooth feature.<br>Start Scan<br>Starts to scan other Bluetooth devices around the phone. If found,<br>user could press "Pair" soft key, and enter Pin code to pair to other<br>Bluetooth devices.<br>Discoverable<br>Defines if the phone is discoverable by other Bluetooth devices.<br>MAC<br>Displays the MAC address of the phone. |

|        | • Upgrade  |
|--------|--|
|        | ○ Firmware Server  |
|        | Configures firmware server for upgrading the phone.  |
|        | <ul> <li>○ Config Server</li> </ul>  |
|        | Configures config server for provisioning the phone.   |
|        | ○ Upgrade Via  |
|        | Specifies upgrade/provisioning via TFTP/HTTP/HTTPS.  |
|        | ○ Start Provison   |
|        | Starts Provision immediately.  |
|        | Factory Functions  |
|        | <ul> <li>Diagnostic Mode</li> </ul>  |
|        | All LEDs will light up. All keys' name will display in red on LCD<br>screen before diagnosing. Press any key on the keypad to<br>diagnose the key's function. When done, the key's name will<br>display in green on LCD. Lift and put back the handset to exit<br>diagnostic mode. |
|        | <ul> <li>o Audio Loopback</li> </ul>   |
|        | Speak to the phone using speaker/handset/headset. If you can hear your voice, your audio is working fine. Press "Exit" soft key to exit audio loopback mode.   |
|        | ○ LCD on/off   |
|        | Selects this option to turn off LCD. Press any button to turn on LCD.  |
|        | ○ LCD Diagnostic   |
|        | Enters this option and press Left/Right Navigation key to do LCD Diagnostic. Press "Exit" soft key to quite.   |
|        | UCM Detect   |
|        | Detect/connect UCM server to process auto-provision. Manually input the IP and port of the UCM server phone wants to bind with; Or select from the available UCM server in network.  |
|        | Operations   |
|        | • Factory Reset  |
|        | Resets the phone to factory default settings.  |
| Reboot | Reboots the phone.   |

The following picture shows the keypad MENU configuration flow.

#### MENU

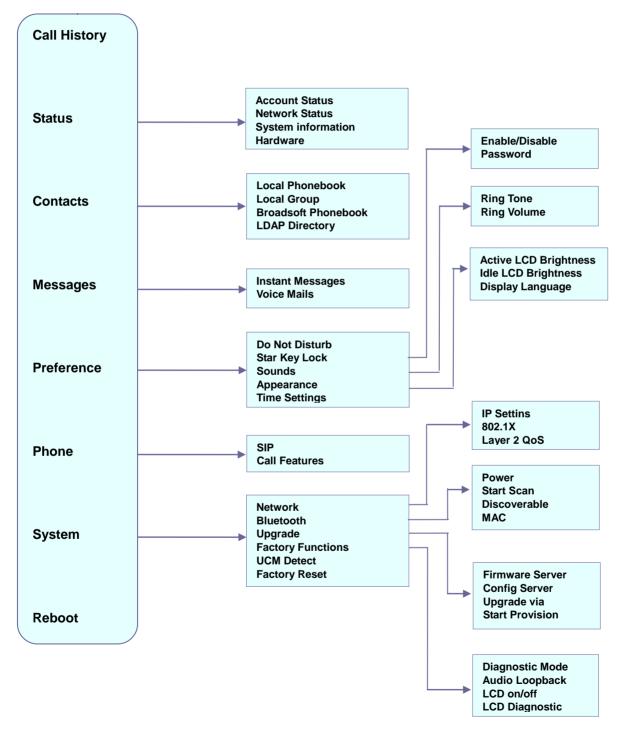

Figure 6: Keypad MENU Flow.

## **CONFIGURATION VIA WEB BROWSER**

The GXP2140/GXP2160 embedded Web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow a user to configure the IP phone through a Web browser such as Microsoft's IE, Mozilla Firefox and Google Chrome.

To access the Web GUI:

- 1. Connect the computer to the same network as the phone;
- 2. Make sure the phone is turned on and shows its IP address. You may check the IP address by pressing Up arrow button when phone is at idle state;
- 3. Open a Web browser on your computer;
- 4. Enter the phone's IP address in the address bar of the browser;
- 5. Enter the administrator's login and password to access the Web Configuration Menu.

#### Note:

- The computer has to be connected to the same sub-network as the phone. This can be easily done by connecting the computer to the same hub or switch as the phone connected to. In absence of a hub/switch (or free ports on the hub/switch), please connect the computer directly to the PC port on the back of the phone;
- If the phone is properly connected to a working Internet connection, the IP address of the phone will display in MENU->Status->Network Status. This address has the format: xxx.xxx.xxx, where xxx stands for a number from 0-255. Users will need this number to access the Web GUI. For example, if the phone has IP address 192.168.40.154, please enter "http://192.168.40.154" in the address bar of the browser;
- The default administrator password is set to "admin". The default end user password is set to "123".
- When changing any settings, always SUBMIT them by pressing the "Save" or "Save and Apply" button
  on the bottom of the page. If the change is saved only but not applied, after making all the changes,
  click on the "APPLY" button on top of the page to submit. After submitting the changes in all the Web
  GUI pages, reboot the phone to have the changes take effect if necessary (All the options under
  "Accounts" page and "Phonebook" page do not require reboot. Most of the options under "Settings"
  page do not require reboot).

## DEFINITIONS

This section describes the options in the phone's Web GUI. As mentioned, you can log in as an administrator or an end user.

- Status: Displays the Account status, Network status, and System Info of the phone;
- Account: To configure the SIP account;
- **Settings:** To configure call features, ring tone, audio control, LCD display, date and time, Web services, XML applications, programmable keys and etc.;
- Network: To configure network settings;
- **Maintenance:** To configure web access, upgrading and provisioning, syslog, language settings, TR-069, security and etc.;
- **Phonebook:** To manage Phonebook and LDAP.

### **STATUS PAGE DEFINITIONS**

| Status -> Account Status |   |
|--------------------------|---|
| Account x                | Account index.  |
| SIP User ID              | Displays the configured SIP User ID.  |
| SIP Server               | Displays the configured SIP Server address.   |
| SIP Registration         | Displays SIP registration status YES/NO.  |
| Status -> Network Status | 3   |
| MAC Address              | Global unique ID of device, in HEX format. The MAC address will be used for provisioning and can be found on the label coming with original box and on the label located on the back of the device. |
| IP Setting               | DHCP, Static IP or PPPoE.   |
| IPv4 Address             | The IPv4 address obtained on the phone.   |
| IPv6 Address             | The IPv6 address obtained on the phone.   |
| Subnet Mask              | The subnet mask obtained on the phone.  |
| Gateway                  | The gateway address obtained on the phone.  |
| DNS Server 1             | The DNS server address 1.   |
| DNS Server 2             | The DNS server address 2.   |
| PPPoE Link Up            | PPPoE connection status.  |
| NAT Type                 | NAT traversal status for each account.  |
| Status -> System Info    |   |
| Product Model            | Product model of the phone.   |
| Part Number              | Product part number.  |
| Software Version         | Boot: boot version number;  |

#### Table 13: Status Page Definitions

|                | <ul> <li>Core: core version number;</li> <li>Base: base version number;</li> <li>Prog: program version number. This is the main firmware release number, which is always used for identifying the software system of the phone;</li> <li>Aux: Aux version number;</li> <li>Dsp: DSP version number.</li> </ul> |
|----------------|--|
| System Up Time | System up time since the last reboot.  |
| System Time    | Current system time on the phone system.   |
| Service Status | GUI and Phone service status.  |
| Core Dump      | Core dump file that could be downloaded for troubleshooting purpose.   |

### **ACCOUNTS PAGE DEFINITIONS**

| Account x -> General Se | ttings   |
|-------------------------|--|
| Account Active          | Activates/deactivates account. The default setting is "Yes".   |
| Account Name            | The name associated with the SIP account.  |
| SIP Server              | The URL or IP address, and port of the SIP server. This is provided by your VoIP service provider (ITSP).  |
| Secondary SIP Server    | The URL or IP address, and port of the SIP server. This will be used when the primary SIP server fails.  |
| Outbound Proxy          | IP address or Domain name of the Primary Outbound Proxy, Media Gateway,<br>or Session Border Controller. It's used by the phone for Firewall or NAT<br>penetration in different network environments. If a symmetric NAT is detected,<br>STUN will not work and ONLY an Outbound Proxy can provide a solution. |
| SIP User ID             | User account information, provided by your VoIP service provider (ITSP). It's usually in the form of digits similar to phone number or actually a phone number.  |
| Authenticate ID         | SIP service subscriber's Authenticate ID used for authentication. It can be identical to or different from the SIP User ID.  |
| Authenticate Password   | The account password required for the phone to authenticate with the ITSP (SIP) server before the account can be registered. After it is saved, this will appear as hidden for security purpose.   |
| Name                    | The SIP server subscriber's name (optional) that will be used for Caller ID display.   |
| Voice Mail User ID      | Allows you to access voice messages by pressing the MESSAGE button on the phone. This ID is usually the VM portal access number. For example, in   |

#### Table 14: Account Page Definitions

|                          | Asterisk server, 8500 could be used.  |
|--------------------------|---|
| Account x -> Network Se  |   |
| DNS Mode                 | <ul> <li>This parameter controls how the Search Appliance looks up IP addresses for hostnames. There are four modes: A Record, SRV, NATPTR/SRV, Use Configured IP. The default setting is "A Record". If the user wishes to locate the server by DNS SRV, the user may select "SRV" or "NATPTR/SRV". If "Use Configured IP" is selected, please fill in the three fields below:</li> <li>Primary IP: The primary IP address where the phone sends DNS query to;</li> <li>Backup IP 1;</li> <li>Backup IP 2.</li> </ul>  |
| NAT Traversal            | This parameter configures whether the NAT traversal mechanism is activated.<br>Users could select the mechanism from No, STUN, Keep-Alive, UPnP, Auto or<br>VPN. If set to "STUN" and STUN server is configured, the phone will route<br>according to the STUN server. If NAT type is Full Cone, Restricted Cone or<br>Port-Restricted Cone, the phone will try to use public IP addresses and port<br>number in all the SIP&SDP messages. The phone will send empty SDP packet<br>to the SIP server periodically to keep the NAT port open if it is configured to be<br>"Keep-Alive". Configure this to be "No" if an outbound proxy is used. "STUN"<br>cannot be used if the detected NAT is symmetric NAT. |
| Proxy-Require            | A SIP Extension to notify the SIP server that the phone is behind a NAT/Firewall. Do not configure this parameter unless this feature is supported on the SIP server.   |
| Account x -> SIP Setting | s -> Basic Settings   |
| TEL URI                  | If the phone has an assigned PSTN telephone number, this field should be set<br>to "User=Phone". Then a "User=Phone" parameter will be attached to the<br>Request-Line and "TO" header in the SIP request to indicate the E.164<br>number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP<br>request. The default setting is "Disable".   |
| SIP Registration         | Selects whether or not the phone will send SIP Register messages to the proxy/server. The default setting is "Yes".   |
| Unregister On Reboot     | If set to "Yes", the SIP user's registration information will be cleared when the phone reboots. The SIP Contact header will contain "*" to notify the server to unbind the connection. The default setting is "No".  |
| Register Expiration      | Specifies the frequency (in minutes) in which the phone refreshes its registration with the specified registrar. The default value is 60 minutes. The maximum value is 64800 minutes (about 45 days).   |
| Reregister Before        | Specifies the time frequency (in seconds) that the phone sends  |

| Expiration  | re-registration request before the Register Expiration. The default value is 0.   |
|---|---|
| Local SIP Port  | Defines the local SIP port used to listen and transmit. The default value is 5060 for Account 1, 5062 for Account 2, 5064 for Account 3, 5066 for Account 4, 5068 for Account 5, 5070 for Account 6.  |
| SIP Registration Failure<br>Retry Wait Time             | Specifies the interval to retry registration if the process is failed. The default value is 20 seconds.   |
| SIP T1 Timeout  | SIP T1 Timeout. The default setting is 0.5 seconds.   |
| SIP T2 Timeout  | SIP T2 Timeout. The default setting is 4 seconds.   |
| SIP Transport   | Determines the network protocol used for the SIP transport. Users can choose from TCP, UDP and TLS.   |
| SIP URI Scheme when using TLS                           | Specifies if "sip:" or "sips:" will be used when TLS/TCP is selected for SIP Transport. The default setting is "sips:".   |
| Use Actual Ephemeral<br>Port in Contact with<br>TCP/TLS | Defines whether the actual ephemeral port in contact with TCP/TLS will be used or not. This is used when TLS/TCP is selected for SIP Transfer. The default setting is "No".   |
| Remove OBP from route                                   | Configures to remove outbound proxy from route. This is used for the SIP Extension to notify the SIP server that the device is behind a NAT/Firewall.   |
| Support SIP Instance ID                                 | Defines whether SIP Instance ID is supported or not. The default setting is "Yes".  |
| SUBSCRIBE for MWI                                       | When set to "Yes", a SUBSCRIBE for Message Waiting Indication will be sent periodically. The phone supports synchronized and non-synchronized MWI. The default setting is "No".   |
| SUBSCRIBE for<br>Registration                           | When set to "Yes", a SUBSCRIBE for Registration will be sent out periodically. The default setting is "No".   |
| Enable 100rel   | The use of the PRACK (Provisional Acknowledgment) method enables reliability to SIP provisional responses (1xx series). This is very important in order to support PSTN internetworking. To invoke a reliable provisional response, the 100rel tag is appended to the value of the required header of the initial signaling messages.   |
| Caller ID Display                                       | When set to "Auto", the phone will look for the caller ID in the order of P-Asserted Identity Header, Remote-Party-ID Header and From Header in the incoming SIP INVITE. When set to "Disabled", all incoming calls are displayed with "Unavailable". When set to "From Header", the phone will display the caller ID based on the From Header in the incoming SIP INVITE. The default setting is "Auto". |
| Use Privacy Header                                      | Controls whether the Privacy Header will present in the SIP INVITE message or not. The default setting is "default", which is when "Huawei IMS" special   |

| feature is on, the Privacy Header will not show in INVITE. If set to "Yes", the         Privacy Header will always show in INVITE. |--|--|
|  | The share will exheavible and notify shout user encodes to OID server. The   |
| Enable User Presence<br>Subscription                         | The phone will subscribe and notify about user presence to SIP server. The SIP server should support this feature.   |
| Hide Login Soft Key On<br>Auto User Presence<br>Subscription | The soft key to login or logout will be hidden on idle screen if auto login ID is configured below.  |
| Auto User Presence ID  | The phone will subscribe user presence automatically with this ID once the account is registered.  |
| Auto User Presence password                                  | The phone will subscribe user presence automatically with this password once the account is registered.  |
| Special Feature  | Different soft switch vendors have special requirements. Therefore users may<br>need select special features to meet these requirements. Users can choose<br>from Standard, Nortel MCS, Broadsoft, CBCOM, RNK, Sylantro or Huawei IMS<br>depending on the server type. The default setting is "Standard".  |
| Account x -> SIP Setting                                     | s -> Session Timer   |
| Session Expiration   | The SIP Session Timer extension that enables SIP sessions to be periodically "refreshed" via a SIP request (UPDATE, or re-INVITE). If there is no refresh via an UPDATE or re-INVITE message, the session will be terminated once the session interval expires. Session Expiration is the time (in seconds) where the session is considered timed out, provided no successful session refresh transaction occurs beforehand. The default value is 180 seconds. |
| Min-SE   | The minimum session expiration (in seconds). The default value is 90 seconds.  |
| Caller Request Timer   | If set to "Yes" and the remote party supports session timers, the phone will use a session timer when it makes outbound calls.   |
| Callee Request Timer   | If set to "Yes" and the remote party supports session timers, the phone will use a session timer when it receives inbound calls.   |
| Force Timer  | If Force Timer is set to "Yes", the phone will use the session timer even if the remote party does not support this feature. If Force Timer is set to "No", the phone will enable the session timer only when the remote party supports this feature. To turn off the session timer, select "No".  |
| UAC Specify Refresher  | As a Caller, select UAC to use the phone as the refresher; or select UAS to use the Callee or proxy server as the refresher.   |
| UAS Specify Refresher  | As a Callee, select UAC to use caller or proxy server as the refresher; or select UAS to use the phone as the refresher.   |
| Force INVITE   | The Session Timer can be refreshed using the INVITE method or the UPDATE method. Select "Yes" to use the INVITE method to refresh the session timer.   |

# Account x -> SIP Settings -> Security Settings

|  | s -> Security Settings   |
|--|--|
| Check Domain<br>Certificates               | Defines whether the domain certificates will be checked or not when TLS/TCP is used for SIP Transport. The default setting is "No".  |
| Validate Incoming<br>Messages              | Defines whether the incoming messages will be validated or not. The default setting is "No".   |
| Check SIP User ID for incoming INVITE      | If set to "Yes", SIP User ID will be checked in the Request URI of the incoming INVITE. If it doesn't match the phone's SIP User ID, the call will be rejected. The default setting is "No".   |
| Accept Incoming SIP from Proxy Only        | When set to "Yes", the SIP address of the Request URL in the incoming SIP message will be checked. If it doesn't match the SIP server address of the account, the call will be rejected. The default setting is "No".  |
| Authenticate Incoming<br>INVITE            | If set to "Yes", the phone will challenge the incoming INVITE for authentication with SIP 401 Unauthorized response. The default setting is "No".  |
| Account x -> Audio Setti                   | ngs  |
| Send DTMF                                  | Specifies the mechanism to transmit DTMF digits. There are 3 supported modes: in audio which means DTMF is combined in the audio signal (not very reliable with low-bit-rate codecs), via RTP (RFC2833), or via SIP INFO.  |
| DTMF Payload Type                          | Configures the payload type for DTMF using RFC2833. The default value is 101.  |
| Preferred Vocoder                          | 7 different vocoder types are supported on the phone, including G.711 U-law (PCMU), G.711 A-law (PCMA), G.729A/B, G.722 (wide band) and G72-32. Users can configure vocoders in a preference list that is included with the same preference order in SDP message.  |
| Use First Matching<br>Vocoder in 200OK SDP | When set to "Yes", the device will use the first matching vocoder in the received 2000K SDP as the codec. The default setting is "No".   |
| SRTP Mode                                  | Enables the SRTP mode based on your selection. The default setting is "Disabled".  |
| Symmetric RTP                              | Defines whether symmetric RTP is supported or not. The default setting is "No".  |
| Silence Suppression                        | Controls the silence suppression/VAD feature of the audio codec G.729. If set to "Yes", when silence is detected, a small quantity of VAD packets (instead of audio packets) will be sent during the period of no talking. If set to "No", this feature is disabled. The default setting is "No".        |
| Voice Frames Per TX                        | Configures the number of voice frames transmitted per packet. When configuring this, it should be noted that the "ptime" value for the SDP will change with different configurations here. This value is related to the codec used and the actual frames transmitted during the in payload call. For end |

|                           | users, it is recommended to use the default setting, as incorrect settings may influence the audio quality.   |
|---------------------------|---|
| G.726-32 Packing Mode     | Selects "ITU" or "IETF" for G726-32 packing mode.   |
| Jitter Buffer Type        | Selects either Fixed or Adaptive based on network conditions. The default setting is "Adaptive".  |
| Jitter Buffer Length      | Selects Low, Medium, or High based on network conditions. The default setting is "Medium".  |
| Account x -> Call Setting | js  |
| Early Dial                | Selects whether or not to enable early dial. If it's set to "Yes", the SIP proxy must support 484 response. The default setting is "No".  |
| Dial Plan Prefix          | Sets the prefix added to each dialed number.  |

### SETTINGS PAGE DEFINITIONS

Table 15: Settings Page Definitions

| Settings -> General Settings |  |
|------------------------------|--|
| Local RTP Port               | This parameter defines the local RTP port used to listen and transmit. It is the base RTP port for channel 0. When configured, channel 0 will use this port _value for RTP; channel 1 will use port_value+2 for RTP. Local RTP port ranges from 1024 to 65400 and must be even. The default value is 5004. |
| Use Random Port              | When set to "Yes", this parameter will force random generation of both<br>the local SIP and RTP ports. This is usually necessary when multiple<br>phones are behind the same full cone NAT. The default setting is "Yes"<br>(This parameter must be set to "No" for Direct IP Calling to work).            |
| Keep-alive Interval          | Specifies how often the phone sends a blank UDP packet to the SIP server in order to keep the "ping hole" on the NAT router to open. The default setting is 20 seconds.  |
| Use NAT IP                   | The NAT IP address used in SIP/SDP messages. This field is blank at the default settings. It should ONLY be used if it's required by your ITSP.  |
| STUN Server                  | The IP address or Domain name of the STUN server. STUN resolution results are displayed in the STATUS page of the Web GUI. Only non-symmetric NAT routers work with STUN.  |
| Public Mode                  | Configures to turn on/off public mode for hot desking feature on the phone. If set to "Yes", users would need fill in the SIP Server address for account 1 as well. Then reboot the phone. When the phone boots up, users will need enter SIP User ID and Password on the LCD to login and use the phone.  |
|                              | When the phone is in public mode login screen, press CONF button will have the IP address of the phone displayed.  |
| Settings -> Call Features    |  |
| Off-hook Auto Dial           | Configures a User ID/extension to dial automatically when the phone is off hook. The phone will use the first account to dial out. The default setting is "No".  |
| Off-hook Timeout             | If configured, when the phone is on hook, it will go off hook after the timeout (in seconds). The default value is 30 seconds.   |
| Intercom User ID             | Configures the intercom extension number for account 1 to dial out. This User ID is mapped to the INTERCOM button on the phone.  |
| Disable Call Waiting         | Disables the call waiting feature. The default setting is "No".  |
| Disable Call Waiting Tone    | Disables the call waiting tone when call waiting is on. The default setting  |

|  | is "No".  |
|--|---|
| Disable Direct IP Call   | Disables Direct IP Call. The default setting is "No".   |
| Use Quick IP Call mode   | When set to "Yes", users can dial an IP address under the same LAN/VPN segment by entering the last octet in the IP address. To dial quick IP call, off hook the phone and dial #XXX (X is 0-9 and XXX <=255), phone will make direct IP call to aaa.bbb.ccc.XXX where aaa.bbb.ccc comes from the local IP address REGARDLESS of subnet mask. #XX or #X are also valid so leading 0 is not required (but OK). No SIP server is required to make quick IP call. The default setting is "No". |
| Disable Conference   | Disables the Conference function. The default setting is "No".  |
| Disable in-call DTMF Display   | When it's set to "Yes", the DTMF digits entered during the call will not display. The default setting is "No".  |
| Enable sending DTMF via<br>Speed Dial  | Enables Multi Purpose Key to send DTMF during the call. The default setting is "No".  |
| Disable DND Button   | If set to "Yes", the DND button will not set the phone to DND. The default setting is "No".   |
| Enable Idle Mute   | If this feature is enabled, MUTE key will take effect in idle state and future incoming call will be answered with mute.  |
| Disable Transfer   | Disables the Transfer function. The default setting is "No".  |
| In-call dial number on pressing transfer key   | Configures the number for the phone to dial as DTMF during the call using TRAN button.  |
| Auto-Attended Transfer   | If set to "Yes", the phone will use attended transfer by default. The default setting is "No".  |
| Do Not Escape # as %23 in SIP URI  | Specifies whether to replace # by %23 or not for some special situations.<br>The default setting is "No".   |
| Click-To-Dial Feature  | Enables Click-To-Dial feature. The default setting is "Disabled".   |
| Call History Flash Writing:<br>Write Timeout   | Defines the interval (in seconds) to save the call history to phone's flash.<br>The default value is 300 seconds.   |
| Call History Flash Writing:<br>Max Unsaved Log   | Defines the number of unsaved logs before written to phone's flash. The default value is 200 entries.   |
| Settings -> Ring Tone  |   |
| Call Progresses Tones:<br>System Ring Tone<br>Dial Tone<br>Message Waiting<br>Ring Back Tone | Configures ring or tone frequencies based on parameters from local telecom. The default value is North American standard. Frequencies should be configured with known values to avoid uncomfortable high pitch sounds.  |
| Call-Waiting Tone  | Syntax: f1=val,f2=val[,c=on1/off1[-on2/off2[-on3/off3]]];   |

| Busy Tone       (Frequencies are in Hz and cadence on and off are in 10ms)         Reorder Tone       ON is the period of ringing ("On time" in 'ms') while OFF is the period of silence. In order to set a continuous ring, OFF should be zero. Otherwise it will ring ON ms and a pause of OFF ms and then repeat the pattern. Up to three cadences are supported.         Call Waiting Tone Gain       Configures the call waiting tone gain to adjust call waiting tone volume. The default setting is "Low".         Settings -> Audio Control       When headset is connected to the phone, users could use the HEADSET button in "Default Mode" or "Toggle Headset/Speaker".         •       Default Mode:       >         >       When headset is connected to the phone, users could use the HEADSET button in "Default Mode" or "Toggle Headset/Speaker".         •       Default Mode:       >         >       When the phone is in idle, press HEADSET button to off hook the phone and make calls by using headset. |---|---|
| Headset RX gain                             | Configures the receiving gain of the headset. The default value is 0dB.   |
| Handset TX gain                             | Configures the transmission gain of the handset. The default value is 0 dB.   |
| Settings -> LCD Display                     |   |
| Backlight Brightness: Active                | Configures the LCD brightness when the phone is active. Valid range is 10 to 100 where 100 is the brightest. Default value is 70.   |
| Backlight Brightness: Idle                  | Configures the LCD brightness when the phone is idle. Valid range is 10 to 100 where 0 is off and 100 is the brightest. Default value is 30.  |
| Disable Missed Call Backlight               | Configures the backlight to be on or off when there is missed call.   |
| Settings -> Date and Time                   |   |
| NTP Server                                  | Defines the URL or IP address of the NTP server. The phone may obtain the date and time from the server.  |
| Allow DHCP Option 42<br>Override NTP Server | Defines whether DHCP Option 42 should override NTP server or not.<br>When enabled, DHCP Option 42 will override the NTP server if it's set up<br>on the LAN. The default setting is "Yes".  |
| Time Zone                                   | Configures the date/time used on the phone according to the specified time zone.  |
|   | This parameter allows the users to define their own time zone.<br>The syntax is: <b>std offset dst [offset], start [/time], end [/time]</b><br>Default is set to: <b>MTZ+6MDT+5,M4.1.0,M11.1.0</b>  |
|   | <b>MTZ+6MDT+5</b><br>This indicates a time zone with 6 hours offset with 1 hour ahead (when daylight saving) which is U.S central time. If it is positive (+) if the local time zone is west of the Prime Meridian (A.K.A: International or |
| Self-Defined Time Zone                      | Greenwich Meridian) and negative (-) if it is east.<br><b>M4.1.0,M11.1.0</b><br>The 1st number indicates Month: 1,2,3, 12 (for Jan, Feb,, Dec)<br>The 2nd number indicates the nth iteration of the weekday: (1st Sunday,                   |
|   | 3 <sup>rd</sup> Tuesday)<br>The 3rd number indicates weekday: 0,1,2,,6( for Sun, Mon,<br>Tues, ,Sat)<br>Therefore, this example is the DST which starts from the First Sunday of<br>April to the 1st Sunday of November.                    |
| Date Display Format                         | Configures the date display format on the LCD. The following formats are supported:   |

|                               | <ul> <li>yyyy-mm-dd: 2012-07-02</li> <li>mm-dd-yyyy: 07-02-2012</li> <li>dd-mm-yyyy: 02-07-2012</li> <li>dddd, MMMM dd: Friday, October 12</li> <li>MMMM dd, dddd: October 12, Friday</li> </ul>   |
|-------------------------------|--|
| Time Display Format           | Configures the time display in 12-hour or 24-hour format on the LCD. The default setting is in 12-hour format.   |
| Settings -> Web Service       |  |
| Enable Weather Update         | Configures to enable or disable weather update on the phone. The default setting is "Yes". If set to "No", the weather information screen will not show.   |
| City Code                     | Configures weather city code for the phone to look up the weather information. The default setting is "Automatic" and the weather information will be obtained based on the IP location of the phone if available. Otherwise, specify the self-defined city code. For example, USCA0638 is the city code for Los Angeles, CA, United States. |
| Update Interval               | Specifies the weather update interval (in minutes). The default value is 15 minutes.   |
| Degree Unit                   | Specifies the degree unit for the weather information to display on the phone.   |
| Enable Currency Update        | Configures to enable or disable currency update on the phone. The default setting is "Yes". If set to "No", the currency information screen will not show.   |
| Currency Code                 | Configures currency code for the phone to look up and display the currency information.  |
| Settings -> XML Applications  |  |
| Server Path                   | Configures the server path to download the idle screen XML file. This field could be IP address or URL, with up to 256 characters.   |
| Softkey Label                 | Specifies the soft key name displayed on the idle screen for the users to enter XML application.   |
| Settings -> Programmable Keys |  |
| Line Key X                    | <ul> <li>Assigns a function to the corresponding line key. The key mode options are:</li> <li>Line <ul> <li>Regular line key to open up a line and switch line. The Value field can be left blank.</li> </ul> </li> <li>Shared Line</li> </ul>   |
|                               |  |

Share line for Shared Line Appearance feature. Select the Account registered as Shared line for the line key. The Value field can be left blank.

- Speed Dial Select the Account to dial from. And enter the Speed Dial number in the Value field to be dialed.
- Busy Lamp Field (BLF) Select the Account to monitor the BLF status. Enter the extension number in the Value field to be monitored.
- Presence Watcher
   This option has to be supported by a presence server and it is tied to the "Do Not Disturb" status of the phone's extension.
- Eventlist BLF

This option is similar to the BLF option but in this case the PBX collects the information from the phones and sends it out in one single notify message. PBX server has to support this feature.

- Speed Dial via active account Similar to Speed Dial but it will dial based on the current active account. For example, if the phone is offhook and account 2 is active, it will call the configured Speed Dial number using account 2.
- Dial DTMF

Enter a series of DTMF digits in the Value field to be dialed during the call. "Enable MPK Sending DTMF" has to be set to "Yes" first.

Voice Mail

Select Account and enter the Voice Mail access number in the Value field.

• Call Return

The last answered calls can be dialed out by using Call Return. The Value field should be left blank. Also, this option is not binding to the account and the call will be returned based on the account with the last answered call.

• Transfer

Select Account, and enter the number in the Value field to be transferred (blind transfer) during the call.

Call Park

Select Account, and enter the call park extension in the Value field to park/pick up the call.

• Intercom Select Account, and enter the extension number in the Value field to do the intercom.

|  | <ul> <li>LDAP Search         This option is to narrow the LDAP search scope. Enter the LDAP search base in the Name field. It could be the same or different from the Base in LDAP configuration under Advanced Settings. The Base in LDAP configuration will be used if the Name field is left blank. Enter the LDAP Name/Number filter in the Value field. LDAP search does not support entering Non-ASCII characters     </li> </ul>  |
|--|--|
| Multi-Purpose Key(Only for<br>GXP2160)<br>/Extension Boards(Only for<br>GXP2140) | <ul> <li>Assigns a function to the corresponding Multi Purpose Key. The key mode options are:</li> <li>Speed Dial<br/>Select the Account to dial from. And enter the Speed Dial number in the Value field to be dialed.</li> <li>BLF (Busy Lamp Field)<br/>This option has to be supported on the PBX and it indicates the status of the extension. The three possible states are idle (green), busy (red), ringing (blinking red).</li> <li>Presence Watcher<br/>This option has to be supported by a presence server and it is tied to the "Do Not Disturb" status of the phone's extension.</li> <li>Eventlist BLF<br/>This option is similar to the BLF option but in this case the PBX collects the information from the phones and sends it out in one single notify message. PBX server has to support this feature.</li> <li>Speed Dial via active account<br/>Similar to Speed Dial but it will dial based on the current active account. For example, if the phone is offhook and account 2 is active, it will call the configured Speed Dial number using account 2.</li> <li>Dial DTMF<br/>Enter a series of DTMF digits in the Value field to be dialed during the call. "Enable MPK Sending DTMF" has to be set to "Yes" first.</li> <li>Voice Mail<br/>Select Account and enter the Voice Mail access number in the Value field.</li> <li>Call Return<br/>The last answered calls can be dialed out by using Call Return. The Value field should be left blank. Also, this option is not binding to the account with the last answered call.</li> <li>Transfer</li> </ul> |

Select Account, and enter the number in the Value field to be transferred (blind transfer) during the call.

Call Park

Select Account, and enter the call park extension in the Value field to park/pick up the call.

- Intercom Select Account, and enter the extension number in the Value field to do the intercom.
- LDAP Search

This option is to narrow the LDAP search scope. Enter the LDAP search base in the Name field. It could be the same or different from the Base in LDAP configuration under Advanced Settings. The Base in LDAP configuration will be used if the Name field is left blank. Enter the LDAP Name/Number filter in the Value field.

### **NETWORK PAGE DEFINITIONS**

Table 16: Network Page Definitions

| Network -> Basic Setting            | js  |
|-------------------------------------|---|
| Internet Protocol                   | Selects Prefer IPv4 or Prefer IPv6.   |
| IPv4 Address Type                   | Allows users to configure the appropriate network settings on the phone to obtain IPv4 address. Users could select "DHCP", "Static IP" or "PPPoE". By default, it is set to "DHCP". |
| DHCP Host name<br>(Option 12)       | Specifies the name of the client. This field is optional but may be required by some Internet Service Providers.  |
| DHCP Vendor Class ID<br>(Option 60) | Used by clients and servers to exchange vendor class ID.  |
| PPPoE Account ID                    | Enter the PPPoE account ID.   |
| PPPoE Password                      | Enter the PPPoE Password.   |
| PPPoE Service Name                  | Enter the PPPoE Service Name.   |
| IPv4 Address                        | Enter the IP address when static IP is used.  |
| Subnet Mask                         | Enter the Subnet Mask when static IP is used for IPv4.  |
| Gateway                             | Enter the Default Gateway when static IP is used for IPv4.  |
| DNS Server 1                        | Enter the DNS Server 1 when static IP is used for IPv4.   |
| DNS Server 2                        | Enter the DNS Server 2 when static IP is used for IPv4.   |
| Preferred DNS Server                | Enter the Preferred DNS Server for IPv4.  |
| IPv6 Address Type                   | Allows users to configure the appropriate network settings on the phone to  |

|                                      | obtain IPv6 address. Users could select "Auto-configured" or "Statically configured" for the IPv6 address type.  |
|--------------------------------------|--|
| Static IPv6 Address                  | Enter the static IPv6 address when Full Static is used in "Statically configured" IPv6 address type.   |
| IPv6 Prefix Length                   | Enter the IPv6 prefix length when Full Static is used in "Statically configured" IPv6 address type.  |
| IPv6 Prefix                          | Enter the IPv6 Prefix (64 bits) when Prefix Static is used in "Statically configured" IPv6 address type.   |
| DNS Server 1                         | Enter the DNS Server 1 for IPv6.   |
| DNS Server 2                         | Enter the DNS Server 2 for IPv6.   |
| Preferred DNS server                 | Enter the Preferred DNS Server for IPv6.   |
| Network -> Advanced Se               | ttings   |
| 802.1X mode                          | Allows the user to enable/disable 802.1X mode on the phone. The default value is disabled. To enable 802.1X mode, this field should be set to EAP-MD5.   |
| 802.1X Identity                      | Enter the Identity for the 802.1X mode.  |
| MD5 Password                         | Enter the MD5 Password for the 802.1X mode.  |
| 802.1X CA Certificate                | Upload 802.1X CA certificate to the phone; or delete existed 802.1X CA certificate from the phone.   |
| 802.1X Client Certificate            | Upload 802.1X Client certificate to the phone; or delete existed 802.1X Client certificate from the phone.   |
| HTTP Proxy                           | Specifies the HTTP proxy URL for the phone to send packets to. The proxy server will act as an intermediary to route the packets to the destination.   |
| HTTPS Proxy                          | Specifies the HTTPS proxy URL for the phone to send packets to. The proxy server will act as an intermediary to route the packets to the destination.  |
| Layer 3 QoS                          | Defines the Layer 3 QoS parameter. This value is used for IP Precedence, Diff-Serv or MPLS. The default value is 12.   |
| Layer 2 QoS<br>802.1Q/VLAN Tag       | Assigns the VLAN Tag of the Layer 2 QoS packets. The default value is 0.   |
| Layer 2 QoS 802.1p<br>Priority Value | Assigns the priority value of the Layer2 QoS packets. The default value is 0.  |
| PC Port Mode                         | Configures the PC port mode. When set to "Mirrored", the traffic in the LAN port will go through PC port as well and packets can be captured by connecting a PC to the PC port. The default setting is "Enable". |
| Enable LLDP                          | Control the LLDP(Link Layer Discovery Protocol) service.   |

#### **MAINTENANCE PAGE DEFINITIONS**

#### Table 17: Maitainance Page Definitions

| Maintenance -> Web Acc                         | ess  |
|--|--|
| End User Password                              | Set new password for web GUI access as User. This field is case sensitive.   |
| Confirm Password                               | Enter the new User password again to confirm.  |
| Current Admin Password                         | The current admin password is required for setting a new admin password.   |
| Admin Password                                 | Set new password for web GUI access as Admin. This field is case sensitive.  |
| Confirm Password                               | Enter the new Admin password again to confirm.   |
| Maintenance -> Upgrade                         | and Provisioning   |
| Firmware Upgrade and<br>Provisioning           | Specifies how firmware upgrading and provisioning request to be sent: Always<br>Check for New Firmware, Check New Firmware only when F/W pre/suffix<br>changes, Always Skip the Firmware Check.              |
| XML Config File<br>Password                    | The password for encrypting the XML configuration file using OpenSSL. This is required for the phone to decrypt the encrypted XML configuration file.  |
| HTTP/HTTPS User<br>Name                        | The user name for the HTTP/HTTPS server.   |
| HTTP/HTTPS Password                            | The password for the HTTP/HTTPS server.  |
| Upgrade Via                                    | Allows users to choose the firmware upgrade method: TFTP, HTTP or HTTPS.   |
| Firmware Server Path                           | Defines the server path for the firmware server. It could be different from the configuration server for provisioning.   |
| Config Server Path                             | Defines the server path for provisioning. It could be different from the firmware server for upgrading.  |
| Firmware File Prefix                           | This field enables user to store different versions of firmware files in one single directory on the firmware server. If configured, only the firmware file with the matching prefix will be downloaded.     |
| Firmware File Postfix                          | This field enables user to store different versions of firmware files in one single directory on the firmware server. If configured, only the firmware file with the matching postfix will be downloaded.    |
| Config File Prefix                             | This field enables user to store different configuration files in one single directory on the configuration server. If configured, only the configuration file with the matching prefix will be downloaded.  |
| Config File Postfix                            | This field enables user to store different configuration files in one single directory on the configuration server. If configured, only the configuration file with the matching postfix will be downloaded. |
| Allow DHCP Option 43<br>and Option 66 Override | If DHCP option 43 or 66 is enabled on the LAN side, the TFTP server can be redirected. The default setting is "Yes".   |

| Server  |  |  |  |  |  |
|---|--|--|--|--|--|
| Allow DHCP Option 120<br>to override SIP Server | Enables DHCP Option 120 from local server to override the SIP Server on the phone. The default setting is "No".  |  |  |  |  |
| 3CX Auto Provision                              | Phone will multicast SUBSCRIBE for provision if this feature is enabled.   |  |  |  |  |
| Automatic Upgrade                               | Enables automatic upgrade and provisioning. The default setting is "No".   |  |  |  |  |
| Hour of the Day (0-23)                          | Defines the hour of the day to check the HTTP/TFTP server for firmwar upgrades or configuration files changes. The default value is 1.   |  |  |  |  |
| Day of the Week (0-6)                           | Defines the day of the week to check HTTP/TFTP server for firmware upgrades or configuration files changes. The default value is 1.  |  |  |  |  |
| Authenticate Conf File                          | Authenticates configuration file before acceptance. The default setting is "No".   |  |  |  |  |
| Maintenance -> Syslog                           |  |  |  |  |  |
| Syslog Server                                   | The URL or IP address of the syslog server for the phone to send syslog to.  |  |  |  |  |
| Syslog Level                                    | <ul> <li>Selects the level of logging for syslog. The default setting is "None". There are 4 levels: DEBUG, INFO, WARNING AND ERROR.</li> <li>Syslog messages are sent based on the following events:</li> <li>product model/version on boot up (INFO level);</li> <li>NAT related info (INFO level);</li> <li>sent or received SIP message (DEBUG level);</li> <li>SIP message summary (INFO level);</li> <li>inbound and outbound calls (INFO level);</li> <li>registration status change (INFO level);</li> <li>negotiated codec (INFO level);</li> <li>Ethernet link up (INFO level);</li> <li>SLIC chip exception (WARNING and ERROR levels);</li> <li>memory exception (ERROR level).</li> </ul> |  |  |  |  |
| Send SIP Log                                    | Configures whether the SIP log will be included in the syslog messages. The default setting is "No".   |  |  |  |  |
| Auto Recover From<br>Abnormal                   | If set to "Yes", the phone will automatically recover when running abnormal.   |  |  |  |  |
| Maintenance -> Languag                          |  |  |  |  |  |
| Display Language                                | Selects display language on the phone.   |  |  |  |  |
| Language File Postfix                           | Specifies the language file postfix for downloaded language.   |  |  |  |  |
| Maintenance -> TR-069                           |  |  |  |  |  |
| Enable TR-069                                   | Enables TR-069. The default setting is "No".   |  |  |  |  |
| ACS URL   | URL for TR-069 Auto Configuration Servers (ACS).   |  |  |  |  |
| TR-069 Username                                 | ACS username for TR-069.   |  |  |  |  |

| TR-069 Password                   | ACS password for TR-069.  |  |  |  |
|-----------------------------------|---|--|--|--|
| Periodic Inform Enable            | Enables periodic inform. If set to "Yes", device will send inform packets to the ACS. The default setting is "No".  |  |  |  |
| Periodic Inform Interval          | Sets up the periodic inform interval to send the inform packets to the ACS.   |  |  |  |
| Connection Request<br>Username    | The user name for the ACS to connect to the phone.  |  |  |  |
| Connection Request<br>Password    | The password for the ACS to connect to the phone.   |  |  |  |
| Connection Request Port           | The port for the ACS to connect to the phone.   |  |  |  |
| CPE SSL Certificate               | The Cert File for the phone to connect to the ACS via SSL.  |  |  |  |
| CPE SSL Private Key               | The Cert Key for the phone to connect to the ACS via SSL.   |  |  |  |
| Maintenance -> Security           |   |  |  |  |
| Configuration via Keypad<br>Menu  | <ul> <li>Configures the access control for the users to configure from keypad Menu.</li> <li>There are three different options:</li> <li>Unrestricted. All the options can be accessed in keypad Menu.</li> <li>Basic settings only. The CONFIG option will not display for users to access in keypad Menu.</li> <li>Constraint Mode. CONFIG, FACTORY FUNCTIONS and NETWORK options will not display for users to access in keypad menu.</li> </ul> |  |  |  |
| Enable STAR key<br>Keypad locking | If set to "Yes", the keypad can be locked by pressing and holding the STAR *<br>key for about 4 seconds. A lock icon will show indicating the keypad is locked.<br>The default setting is "Yes".<br><b>Note:</b><br>When the keypad is locked, users would need press and hold the STAR * key<br>for about 4 seconds again and then enter the password to unlock it.  |  |  |  |
| Password to lock/unlock           | Configures the password to lock/unlock the keypad.  |  |  |  |
| SSL TLS Certificate               | SSL Certificate used for SIP Transport in TLS/TCP.  |  |  |  |
| SSL TLS Private Key               | SSL Private key used for SIP Transport in TLS/TCP.  |  |  |  |
| SSL TLS Private Key<br>Password   | SSL Private key password used for SIP Transport in TLS/TCP.   |  |  |  |
| Download Device<br>Configuration  | Click to download the device configuration file in .txt format.   |  |  |  |
| Web Access Mode                   | Sets the protocol for web interface.  |  |  |  |
| Disable SSH                       | Disables SSH access.  |  |  |  |
| Web/Keypad/Restrict               | Specifies the time in minutes that the web or LCD login interface will be locked  |  |  |  |

mode Lockout Duration out to user after five login failures. This lockout time is used for web login, STAR keypad unlock and LCD restrict mode admin login. Range is 0-60 minutes.

#### PHONEBOOK PAGE DEFINITIONS

#### **Table 18: Phonebook Page Definitions** Phonebook -> Contacts Specifies Contact's First Name, Last Name, Phone Number, Accounts and Add Contact Groups to add one new contact in phonebook. Edits selected contact. Edit Contact **Phonebook -> Group Management** Add Group Specifies Group's name to add new group. Edit Group Edits selected group. Phonebook -> Phonebook Management Configures to enable phonebook XML download. Users could select Enable Phonebook XML HTTP/HTTPS/TFTP to download the phonebook file. The default setting is Download "Disabled". Phonebook XML Server Configures the server path to download the phonebook XML. This field could Path be IP address or URL, with up to 256 characters. Configures the phonebook download interval (in minutes). If it's set to 0, the Phonebook Download automatic download will be disabled. The default value is 0. The valid range is Interval 5 to 720 minutes. Remove Manually-edited If set to "Yes", when XML phonebook is downloaded, the entries added Entries on Download manually will be automatically removed. The default setting is "Yes". Download XMI Click on "Download" to download the XML phonebook file to local PC. Phonebook Upload XML Phonebook Click on "Upload" to upload local XML phonebook file to the phone. Control the behavior of phonebook key. There are four options: Default, LDAP **Phonebook Key Function** Search, Local Phonebook, Local Group. Phonebook -> LDAP Server Address Configures the IP address or DNS name of the LDAP server. Port Configures the LDAP server port. Configures the LDAP search base. This is the location in the directory where Base the search is requested to begin. Example:

|                        | dc=grandstream, dc=com<br>ou=Boston, dc=grandstream, dc=com   |  |  |  |  |
|------------------------|---|--|--|--|--|
| User Name              | Configures the bind "Username" for querying LDAP servers. Some LDAP servers allow anonymous binds in which case the setting can be left blank.  |  |  |  |  |
| Password               | Configures the bind "Password" for querying LDAP servers. The field can be left blank if the LDAP server allows anonymous binds.  |  |  |  |  |
| LDAP Number Filter     | Configures the filter used for number lookups.<br>Examples:<br>( (telephoneNumber=%)(Mobile=%) returns all records which has the<br>"telephoneNumber" or "Mobile" field starting with the entered prefix;<br>(&(telephoneNumber=%) (cn=*)) returns all the records with the<br>"telephoneNumber" field starting with the entered prefix and "cn" field set.   |  |  |  |  |
| LDAP Name Filter       | Configures the filter used for name lookups.<br>Examples:<br>( (cn=%)(sn=%)) returns all records which has the "cn" or "sn" field starting<br>with the entered prefix;<br>(!(sn=%)) returns all the records which do not have the "sn" field starting with<br>the entered prefix;<br>(&(cn=%) (telephoneNumber=*)) returns all the records with the "cn" field<br>starting with the entered prefix and "telephoneNumber" field set. |  |  |  |  |
| LDAP Version           | Selects the protocol version for the phone to send the bind requests. The default setting is "Version 3".   |  |  |  |  |
| LDAP Name Attributes   | Specify the "name" attributes of each record which are returned in the LDAP<br>search result. This field allows the users to configure multiple space separated<br>name attributes.<br>Example:<br>gn<br>cn sn description  |  |  |  |  |
| LDAP Number Attributes | Specifies the "number" attributes of each record which are returned in the<br>LDAP search result. This field allows the users to configure multiple space<br>separated number attributes.<br>Example:<br>telephoneNumber<br>telephoneNumber Mobile  |  |  |  |  |
| LDAP Display Name      | Configures the entry information to be shown on phone's LCD. Up to 3 fields   |  |  |  |  |

|                        | can be displayed.<br>Example:<br>%cn %sn %telephoneNumber  |
|------------------------|--|
| Max. Hits              | Specifies the maximum number of results to be returned by the LDAP server. If set to 0, server will return all search results. The default setting is 50.                                      |
| Search Timeout         | Specifies the interval (in seconds) for the server to process the request and client waits for server to return. The default setting is 30 seconds.  |
| Sort Results           | Specifies whether the searching result is sorted or not. The default setting is "No".  |
| LDAP Lookup            | Configures to enable LDAP number searching when dialing and receiving calls.   |
| Lookup Display Name    | Configures the display name when LDAP looks up the name for incoming call<br>or outgoing call. This field must be a subset of the LDAP Name Attributes.<br>Example:<br>gn<br>cn sn description |
| Phonebook -> Broadsoft |  |

| Phonebook -> Broadson |  |  |  |  |
|-----------------------|--|--|--|--|
| Name                  | Specifies phonebook name   |  |  |  |
| Server                | Configures the Broadsoft phonebook server.   |  |  |  |
| Port                  | Configures the Broadsoft phonebook port.   |  |  |  |
| Username              | Specifies the username for phonebook access.   |  |  |  |
| Password              | Specifies the password for phonebook access.   |  |  |  |
| Туре                  | Selects the Broadsoft phonebook type from Group Directory, Personal Directory, Enterprise Directory, Missed Call Log, Placed Call Log and Received Call Log. |  |  |  |

## **NAT SETTINGS**

If the devices are kept within a private network behind a firewall, we recommend using STUN Server. The following settings are useful in the STUN Server scenario:

## • STUN Server

Under **Settings**->**General Settings**, enter a STUN Server IP (or FQDN) that you may have, or look up a free public STUN Server on the internet and enter it on this field. If using Public IP, keep this field blank.

## • Use Random Ports

It is under **Settings**->**General Settings**. This setting depends on your network settings. When set to "Yes", it will force random generation of both the local SIP and RTP ports. This is usually necessary when multiple GXPs are behind the same NAT. If using a Public IP address, set this parameter to "No".

## • NAT Traversal

It is under **Accounts X->Network Settings**. Default setting is "No". Enable the device to use NAT traversal when it is behind firewall on a private network. Select Keep-Alive, Auto, STUN (with STUN server path configured too) or other option according to the network setting.

## **WEATHER UPDATE**

To customize GXP2140/GXP2160 to display weather information for the preferred city, users could go to web GUI->**Settings**->**Web Service** page and enter the city code in the following options:

| Settings                   | Web Service            |   |  |  |  |  |
|----------------------------|------------------------|---|--|--|--|--|
| General Settings           |                        |   |  |  |  |  |
| Call Features              | Weather                |   |  |  |  |  |
| Multicast Paging           | Enable Weather Update  | © No ⊛ Yes  |  |  |  |  |
| Ring Tone<br>Audio Control | City Code              | ⊙ Auto ⊚ Self-Defined City Code                                   |  |  |  |  |
| LCD Display                | Self-Defined City Code | USMA0046  |  |  |  |  |
| Date and Time              | Update Interval        | 15  |  |  |  |  |
| Web Service                | Degree Unit            | ● Auto <sup>©</sup> Fahrenheit <sup>©</sup> Celsius               |  |  |  |  |
| XML Applications           | Stock                  |   |  |  |  |  |

| Extension Boards +         | Enable Stock Update    | ◎ No 	 Yes  |  |  |  |  |
|                            | Stock Code             | DJI;.IXIC;INX;.FTSE;.ST   |  |  |  |  |
|                            | Currency               |   |  |  |  |  |
|                            | Enable Currency Update | © No ⊛ Yes  |  |  |  |  |
|                            | Currency Code          | EUR/USD;GBP/USD;CAD/  |  |  |  |  |
|                            | Currency Code          | EUR/USD;GBP/USD;CAD/  |  |  |  |  |
|                            | I                      | Save Save and Apply Reset   |  |  |  |  |
|                            |                        | Copyright © Grandstream Networks, Inc. 2013. All Rights Reserved. |  |  |  |  |

Figure 7: Web Service

By default the City Code is set to "**Automatic**", which allows the phone to obtain weather information based on the IP location detected. To use "**Self-Defined City Code**" option, please follow the steps below to obtain the correct city code:

- In a web browser, go to <u>www.weather.com;</u>
- Enter the city name in the search field. For example, Boston, MA. And click on "SEARCH";
- The searching result will show in a new window with URL in the browser's address bar. For example, <u>http://www.weather.com/weather/today/Boston+MA+USMA0046:1:US</u>
- In the above link, **USMA0046** is the city code to be filled in "Self-Defined City Code" option.

Users could then further configure the "Update Interval" and "Degree Unit" for weather information display.

## PUBLIC MODE

The GXP2140/GXP2160 supports hot desking using public mode. Under public mode, users could login the phone with the SIP account User ID and password. Please follow the steps below to configure the phone for public mode:

- Fill up the SIP server address for account 1 first;
- Under Web GUI->Settings->General Settings, set "Public Mode" option to "Yes". Click "Save and Apply" and reboot the phone;
- When the phone boots up, SIP User ID and Password to register to the configured SIP server in account 1 will be required. Enter the correct account information to log in to the phone. When entering the account information, press softkey "123"/"abc" to toggle input method;
- In login page, pressing CONF button on the phone will show phone's IP address;
- After using the phone, go to LCD MENU->LogOut to log off the public mode.

## **EDITING CONTACTS AND CLICK-TO-DIAL**

From GXP2140/GXP2160 Web GUI, users could view contacts, edit contacts, or dial out with Click-to-Dial

feature on the top of the Web GUI. In the following figure, the Contact page shows all the added contacts (manually or downloaded via XML phonebook). Here users could add new contact, edit selected contact, or dial the contact/number.

Before using the Click-To-Dial feature, make sure the option "Click-To-Dial Feature" under web GUI->Settings->Call Features is turned on. By default it's disabled and the dialing icon in web GUI is in

grey 🗹

When clicking on the *lice* icon on the top menu of the Web GUI, a new dialing window will show for you to enter the number. Once Dial is clicked, the phone will go off hook and dial out the number from selected account. Please see Figure 4 and Figure 5 in the following pages for more details.

Additionally, users could directly send the command for the phone to dial out by specifying the following URL in PC's web browser, or in the field as required in other call modules.

## http://ip\_address/cgi-bin/api-make\_call?phonenumber=1234&account=0&password=admin/123

In the above link, replace the *fields* with

- <u>ip\_address</u>: Phone's IP Address.
- phonenumber=<u>1234</u>: The number for the phone to dial out
- account=<u>0</u>:

The account index for the phone to make call. The index is 0 for account 1, 1 for account 2, 2 for account 3, and etc.

• password=<u>admin/123</u>:

The admin login password or user login password of phone's Web GUI.

| Q                  |              |                  |              |          |                  |                      |                      |

## SAVING THE CONFIGURATION CHANGES

After users makes changes to the configuration, press the "Save" button will save but not apply the changes until the "Apply" button on the top of web GUI page is clicked. Or, users could directly press "Save and Apply" button. We recommend rebooting or powering cycle the phone after applying all the changes.

## **REBOOTING FROM REMOTE LOCATIONS**

Press the "Reboot" button on the top right corner of the web GUI page to reboot the phone remotely. The web browser will then display a reboot message. Wait for about 1 minute to log in again.

# **CONNECTING TO DEVICES**

The GXP2140/GXP2160 supports the connections to EHS headset (Plantronics), USB and Bluetooth devices.

## **EHS HEADSET**

The GXP2140/GXP2160 supports normal RJ11 headset and Plantronics EHS headset. To use Plantronics EHS headset, go to the GXP2140/GXP2160 web GUI->**Settings->Audio Control**: Headset Type. Select "Plantronics EHS" and reboot the phone to take effect.

- 1. Connect EHS Headset (Plantronics) to GXP2140/GXP2160. Insert headset connector into the RJ11 headset port on the back of GXP2140/GXP2160;
- 2. To use headset mode, press headset button on the GXP2140/GXP2160. A headset icon will show on the GXP2140/GXP2160 status bar.

## BLUETOOTH

Bluetooth is a proprietary, open wireless technology standard for exchanging data over short distances from fixed and mobile devices, creating personal area networks with high levels of security. On GXP2140/GXP2160, users could use Bluetooth to transfer files, share contact information with other Bluetooth portable devices, or use Bluetooth headset for making calls as well as listening to media (music or other audio output) from the GXP2140/GXP2160.

To connect to a Bluetooth device, turn on GXP2140/GXP2160's Bluetooth radio first. The first time when using a new Bluetooth device with the GXP2140/GXP2160, "pair" the device with the phone so that both devices know how to connect securely to each other. After that, users could simply connect to a paired device. Turn off Bluetooth if it's not used.

Bluetooth related settings are under GXP2140/GXP2160's LCD Menu->System->Bluetooth.

### TURNING BLUETOOTH ON OR OFF

- 1. Go to GXP2140/GXP2160's LCD menu->System->Bluetooth;
- 2. Highlight **Power** option by pressing Up/Down arrow key;
- 3. When the **Power** option is highlighted, pressing menu round button to turn on/off Bluetooth.

#### PAIRING GXP2140/GXP2160 WITH A BLUETOOTH DEVICE

Before connecting GXP2140/GXP2160 with other Bluetooth device, users must pair them first. They will stay paired afterwards unless they are unpaired.

- 1. Go to GXP2140/GXP2160's LCD menu->System->Bluetooth;
- 2. Enter Start Scan option;
- 3. The GXP2140/GXP2160 scans and displays the IDs of all available Bluetooth devices in range. If the device you would like to pair with does not show up in the list, ensure that the device is turned on and set to be discoverable. If need, user could press "Rescan" soft key to restart the scan;
- 4. The discovered device will show in the scan result list with device ID. If it's unpaired, it will show "Unpaired" behind the device ID. Select the device ID, and press "Pair" soft key to pair them. Then a "Pincode Input" window will prompt up. User may enter the Pin code, and press "OK" soft key to start pairing.

#### **CONNECTING TO A BLUETOOTH EARPHONE**

After successfully paired, the GXP2140/GXP2160 will show "Paired" behind the Bluetooth device ID in the scan list. Highlight the device ID and press "Connect" soft key to connect.

Once connected, the GXP2140/GXP2160 will show "Connected" behind the Bluetooth device ID in the scan list.

#### **BT ON AND BT OFF**

After successfully connected, the GXP2140/GXP2160 will show "BT OFF" soft key on call screen. Pressing the "BT OFF" soft key, it will change to "BT ON" and the Bluetooth will be turn off. When "BT OFF" soft key appears, the Bluetooth is in use and user could answer the incoming call via Bluetooth.

#### UNPAIRING AND DISCONNECTING A BLUETOOTH DEVICE

In the Bluetooth settings, highlight the Bluetooth device ID and press "Disconnect"/"Unpair" soft key to

disconnect/unpair the Bluetooth device.

# **UPGRADING AND PROVISIONING**

The GXP2140/GXP2160 can be upgraded via TFTP/HTTP/HTTPS by configuring the URL/IP Address for the TFTP/HTTP/HTTPS server and selecting a download method. Configure a valid URL for TFTP or HTTP/HTTPS; the server name can be FQDN or IP address.

#### Examples of valid URLs:

firmware.grandstream.com fw.ipvideotalk.com/gs

There are two ways to setup a software upgrade server: The LCD Keypad Menu or the Web Configuration Interface.

## **UPGRADE VIA KEYPAD MENU**

Follow the steps below to configure the upgrade server path via phone's keypad menu:

- Press MENU button and navigate using Up/Down arrow to select System;
- In the System options, select **Upgrade**;
- Enter the firmware server path and select upgrade method. The server path could be in IP address format or FQDN format;
- Select Start Provision option, and press the "Select" soft key.
- A warning window will be prompt for provision confirmation. Press "YES" soft key to start upgrading/provisioning immediately.

When upgrading starts, the screen will show upgrading progress. When done you will see the phone restarts again. Please do not interrupt or power cycle the phone when the upgrading process is on.

## **UPGRAGE VIA WEB GUI**

Open a web browser on PC and enter the IP address of the phone. Then, login with the administrator username and password. Go to Maintenance->Upgrade and Provisioning page, enter the IP address or

the FQDN for the upgrade server in "Firmware Server Path" field and choose to upgrade via TFTP or HTTP/HTTPS. Update the change by clicking the "Save and Apply" button. Then "Reboot" or power cycle the phone to update the new firmware.

When upgrading starts, the screen will show upgrading progress. When done you will see the phone restart again. Please do not interrupt or power cycle the phone when the upgrading process is on.

Firmware upgrading takes around 60 seconds in a controlled LAN or 5-10 minutes over the Internet. We recommend completing firmware upgrades in a controlled LAN environment whenever possible.

## **NO LOCAL TFTP/HTTP SERVERS**

For users that would like to use remote upgrading without a local TFTP/HTTP server, Grandstream offers a NAT-friendly HTTP server. This enables users to download the latest software upgrades for their phone via this server. Please refer to the webpage:

http://www.grandstream.com/support/firmware

Alternatively, users can download a free TFTP or HTTP server and conduct a local firmware upgrade. A free windows version TFTP server is available for download from : <u>http://www.solarwinds.com/products/freetools/free\_tftp\_server.aspx</u> <u>http://tftpd32.jounin.net/</u>.

Instructions for local firmware upgrade via TFTP:

- 1. Unzip the firmware files and put all of them in the root directory of the TFTP server;
- 2. Connect the PC running the TFTP server and the phone to the same LAN segment;
- 3. Launch the TFTP server and go to the File menu->Configure->Security to change the TFTP server's default setting from "Receive Only" to "Transmit Only" for the firmware upgrade;
- 4. Start the TFTP server and configure the TFTP server in the phone's web configuration interface;
- 5. Configure the Firmware Server Path to the IP address of the PC;
- 6. Update the changes and reboot the phone.

End users can also choose to download a free HTTP server from <u>http://httpd.apache.org/</u> or use Microsoft IIS web server.

## **CONFIGURATION FILE DOWNLOAD**

Grandstream SIP Devices can be configured via the Web Interface as well as via a Configuration File (binary or XML) through TFTP or HTTP/HTTPS. The "Config Server Path" is the TFTP or HTTP/HTTPS

server path for the configuration file. It needs to be set to a valid URL, either in FQDN or IP address format. The "Config Server Path" can be the same or different from the "Firmware Server Path".

A configuration parameter is associated with each particular field in the web configuration page. A parameter consists of a Capital letter P and 2 to 3 (Could be extended to 4 in the future) digit numeric numbers. i.e., P2 is associated with the "New Password" in the Web GUI->Maintenance->Web Access page->Admin Password. For a detailed parameter list, please refer to the corresponding firmware release configuration template.

For more details on XML provisioning, please refer to: http://www.grandstream.com/general/gs\_provisioning\_guide\_public.pdf

# **RESTORE FACTORY DEFAULT SETTINGS**

# Marning:

Restoring the Factory Default Settings will delete all configuration information on the phone. Please backup or print all the settings before you restore to the factory default settings. Grandstream is not responsible for restoring lost parameters and cannot connect your device to your VoIP service provider.

Please follow the instructions below to reset the phone:

- Press MENU button to bring up the keypad configuration menu;
- Select "Config" and enter;
- Select "Factory Reset";
- A warning window will pop out to make sure a reset is requested and confirmed;
- Press the "OK" softkey to confirm and the phone will reboot. To cancel the Reset, press Cancel softkey instead.

# **EXPERIENCING THE GXP2140/GXP2160**

Please visit our website: <u>http://www.grandstream.com</u> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.
